

# TOOL SKETCHER

## GENERATE YOUR TOOL DRAWINGS IN JUST A FEW CLICKS

The "Tool Sketcher" software allows you to quickly and easily create 2D drawings from 3D tool simulations directly from VirtualGrind®Pro.

The following features can be added to the drawing to facilitate the creation of a wide range of complete drawings, sectional drawings and detail views:

- Complete tool, profile, core cross cut, blank profile, detail highlighting
- Dimensions and tolerances on lengths, angles, radii, diameters, chamfer widths

Drawings can be displayed on several pages allowing a detailed perception of manufacturing plans. The drawing can be exported in DXF format or as a PNG image.

Tool views, like dimensional dimensions, can be easily positioned on the sketch so drawings can be modified and customized in a simple and efficient manner.
